

Q-15. Write an SQL query to fetch intersecting records of two tables.

```
select first_name,emp_no from Worker
```

```
intersect
```

```
select first_name,emp_no from Employees
```

Q-16. Write an SQL query to show records from one table that another table does not have.

```
Select * from employees where emp_no not in (select * from worker)
```

Or

```
Select w.first_name,w.last_name , emp.Department from worker w left join employee emp on  
w.emp_no = emp.emp_no -- select rows which are in worker table but not in employees
```
